

Website Performance Healthcheck

A professional services engagement that analyses your website performance from an end user's perspective, identifying key areas for optimisation and providing recommendations for potential improvement.

Key features

The Healthcheck is a packaged advisory engagement using our specialist knowledge, skills and tool set.

Through our four stage process we will complete a detailed performance analysis of your site and then provide you with a prioritised set of actionable performance recommendations.

The engagement involves scanning the breadth and depth of your site's key pages with our 'real browser' Performance Analyser tool together with a combination of open source and other commercially available tools.

We'll discuss with you which browsers are most typical of your user base and provide detailed performance analysis with browser comparisons.

The Healthcheck will:

- Identify the worst performing pages of your site.
- Provide a comprehensive report identifying actionable performance improvement recommendations.
- Give an independent and expert point of view from our experienced consultants.
- Share best practice tools and methodologies for site optimisation.
- Help you to prioritise performance improvements and deliver a site that is optimised for your customers.

Why Site Confidence?

- **Experience** - founded in 2001 as one of the UK's first web monitoring companies, our reputation is well established and respected.
- **Independence** – we are independent from any hardware or software provider, so our advice is always unbiased.
- **Service** – we are fast, responsive and proactively tailor our services to meet your requirements.
- **Value** – our services offer genuine value; you only pay for what you need.
